

Disability Support Pension Impairment Tables Questionnaire

Response: 115

Anonymous

11a Select the key theme of the proposed changes to the Impairment Tables that is the most important to you

Medical evidence requirements

11b Select the theme of the proposed changes to the Impairment Tables that is the second most important to you

Mental health

11c Select the theme of the proposed changes to the Impairment Tables that is the third most important to you

Neurodiversity

12a (i) The removal of the term 'permanent condition' provides greater clarity that a condition must persist for two years as part of the DSP eligibility criteria

Strongly agree

12a (ii) The proposed changes more clearly describe the requirements of diagnosis, treatment and stabilisation of conditions for DSP assessment

Strongly agree

13a (i) The inclusion of additional defined terms provides greater clarity around terminology used in the Instrument

Agree

13a (ii) Simplification in Part 2 of the Instrument improves the guidance and readability of the section

Agree

13a (iii) The proposed changes to Table introductions and descriptors has made it easier to understand the requirements of Tables

Agree

13a (iv) The additional guidance in appropriate Tables provides greater clarity when considering functional impairment. For example an additional guidance point to all Tables on fluctuating and episodic conditions

Agree

13a (v) The updating of references to relevant assistive technology provides clearer guidance and modernises the Tables

Agree

13a (vi) The broader range of examples in the Tables illustrates how a person's functional impairment may impact their ability to work

Agree

14a The proposed changes recognise and capture the functional impacts relating to alcohol, drug and other substance misuse in appropriate Tables

Agree

15a The addition of guidance recognises the impacts of ongoing side effects from prescribed medication and treatment

Agree

16a (i) Proposed changes better represent the functional impact of pain

Agree

16a (ii) Additional examples of pain related conditions that result in functional impairment provide more clarity around the types of conditions that may be assessed against a Table

Agree

17a Additional examples of chronic illnesses that result in functional impairment provide greater clarity around the types of conditions that may be assessed against a Table

Agree

18a Additional examples of renal conditions that result in functional impairment provide more clarity around the types of conditions that may be assessed against a Table

Agree

19a (i) Additional examples of fatigue related conditions that result in functional impairment provide greater clarity around the types of conditions that may be assessed against a Table

Agree

19a (ii) The inclusion of a personal care descriptor captures the functional impacts of fatigue on a person's ability to undertake personal care activities

Agree

19a (iii) Proposed changes better represent the functional impact of fatigue related conditions

Agree

19b Please provide any additional comments regarding changes about fatigue.

I think it is important to acknowledge that autism is a fatigue related condition.

20a Additional examples of cancer and subsequent conditions that result in functional impairment provide more clarity around these types of conditions that may be assessed against a Table

Agree

21a (i) Additional examples of specific pieces of evidence that may be used to support a claim assists individuals to identify the accepted range of medical evidence that can be provided

Agree

21a (ii) Additional examples of professionals assists individuals identify the range of appropriate practitioners who are able to provide medical evidence in support of their claims

Agree

21b Please provide any additional comments regarding changes to medical evidentiary requirements.

The need for a medical practitioner to provide a diagnosis discriminates strongly against people with a late diagnosis of autism. Psychologists have a far greater ability to diagnose autism, and it is often very poorly understood by psychiatrists. Due to the difficulty of diagnosing autism, it is necessary to see a specialist to obtain a diagnosis and that specialist group is psychologists. The treatment, as it exists for autism is also most provided by allied health not 'medical practitioners.'

This also applies for many mental health issues that do not involve psychosis. They are more frequently diagnosed and treated by psychologists. Depression and anxiety for example.

22a (i) Addition of descriptors better capture shoulder function in Table 2 - Upper Limb Function

Agree

22a (ii) The addition of descriptors for the loss of function of a dominant limb under Table 2 – Upper Limb Function better recognises functional impacts of losing a dominant upper limb

Agree

22a (iii) Additional examples of specific skin conditions that result in functional impairment provide more clarity around the types of conditions that may be assessed against a Table

Agree

23a The proposed changes better capture the functional impacts of balance, dizziness and a person's ability to stand

Agree

24a The proposed change will better support individuals by providing a broader range of medical professionals allowed to provide corroborating evidence in support of a diagnosis of a mental health condition for assessment under Table 5 – Mental Health Function

Agree

24b Please provide any additional comments regarding changes about psychologists.

This is good, but it does not go far enough.

25a The proposed changes improve alignment with other recognised mental health assessment tools (including the World Health Organization Disability Assessment Schedule –WHODAS, Diagnostic and Statistical Manual of Mental Disorders – DSM, World Health Organization International Classification of Diseases - ICD)

Strongly agree

26a (i) Proposed changes better reflect conditions on the spectrum of neurodiversity

Agree

26a (ii) The addition of a new social skills descriptors in the table relating to brain function recognise difficulties a neurodivergent person may experience in social situations

Agree

26b Regarding the proposed change on Table 6 – Brain Function to better recognise social skills difficulties, would you prefer to:

add a new social skills descriptor and require a person to meet at least two descriptors for the relevant impairment rating to be assigned

26c Please provide any additional comments regarding changes about neurodiversity.

I feel the tables lack the inclusion of issues experienced by neurodivergent individuals in relation to executive function and to fatigue.

27a The proposed changes better recognise the need for culturally appropriate assessments

Agree
